

Win Control

Limit access to your computer and its functions. Now with more than 140 system restrictions.

This security tool allows you to restrict your users from accessing important system resources like the control panel, the desktop, screensavers and the registry. Hide entries in the Start menu, restrict downloads in Internet-Explorer and many others.

Select also, which programs each user is able to run and which programs are restricted. Restrictions can even be set for each individual user or group. Set a fixed wallpaper and avoid unwanted desktop wallpapers in future! A very useful tool for all administrators/parents and teachers, who are fed up of setting up the system over and over again. Notice: Win Control does not include a webfilter. If you need such a tool have a look at our program [User Control](#).

Just click on a screenshot to find out more and see a larger screenshot.
